SUMMARY

Frontend-focused software engineer delivering fast, visually consistent React applications. Skilled at building production-ready, data-rich interfaces scaling across teams through shared UI patterns and design systems. Experienced in collaborating with backend and cloud services and maintaining reliable delivery with CI/CD. Strong in leading UI initiatives, improving team workflows, and driving adoption of scalable design systems.

EXPERIENCE

- PDF Solutions – Intel** Austin, TX
UI / Fullstack Developer *July 2023 – Present*
Intel Data Analysis Platform
 - Led front-end development of a React and TypeScript analytics UI providing business users rapid access to operational insights, reducing time-to-first insight by 50%.
 - Collaborated with product analysts to design visual exploration views in D3.js and Chart.js, replacing slide and spreadsheet workflows and saving 8–10 hours per analyst per week.
 - Designed and implemented a Node.js, Express, and PostgreSQL backend layer with role-based access, batching, and caching, keeping API responses under 300 ms.
 - Configured Jenkins CI/CD with Jest coverage thresholds and deployed to IIS server, ensuring only validated builds were released and test coverage stayed at 85%.
- React Storybook Design System**
 - Owned a React Storybook based design system with 75+ audited components and design tokens, adopted by 12+ projects to prevent inconsistent UI and duplicate component work.
 - Directed automation efforts using GitHub Actions and a private npm registry to build, test, generate changelogs, and publish Storybook, enabling a complete hands-off release workflow.
 - Configured Chromatic visual regression tests in CI, resulting in zero production visual regressions and 30% faster design reviews.
 - Introduced automated documentation workflows using GitHub Copilot and GPT-4 for prop tables, test stubs, and docs, increasing development throughput by 40%.
- Amazon** Austin, TX
Software Development Engineer *May 2022 – March 2023*
 - Enhanced the Environmental Health & Safety platform used by 4,500+ sites in 42 countries by improving front-end flows and data handling, reducing workflow completion time by 25%.
 - Built a React, TypeScript, and GraphQL front end integrated with AWS Lambda, API Gateway, and MirageJS/AppSync to support serverless and mock-data development.
 - Maintained CI/CD with AWS CodeBuild and CodePipeline and expanded automated tests with JUnit, keeping coverage at 90% and releases consistent.
 - Added new features to AppSync models and lightweight REST services on AWS (Lambda, DynamoDB, SNS/SQS) to expose data needed by UI components.
- University of Cincinnati** Cincinnati, OH
Graduate Assistant *May 2021 – April 2022*
 - Mentored and guided student teams building full-stack applications in React and Node.js, providing technical feedback and reviewing work from a customer-experience perspective.

SKILLS

Frontend: React.js, TypeScript, JavaScript, Storybook, D3.js, Chart.js, React Native, Next.js, Bootstrap.

Backend: Node.js, Express.js, REST APIs, PostgreSQL, MongoDB, MySQL

Testing: Jest, React Testing Library, JUnit, Cypress, Playwright, Karma, Jasmine, Mockito, TestNG

DevOps/Cloud: AWS (Lambda, CodeBuild, CloudWatch, S3), Docker, CI/CD, Terraform, Jenkins, Nexus.

Collaboration: Figma, Zeplin, Jira, Confluence, VS Code, IntelliJ IDEA, Eclipse, DBeaver, pgAdmin.

EDUCATION

- **University of Cincinnati** Cincinnati, OH, USA
Master of Engineering in Computer Science - GPA: 3.6/4 Jan 2021 – Apr 2022
- **Anna University** Chennai, India
Bachelor of Engineering in Computer Science - 84% Aug 2016 – Aug 2020
